

Crushed Glass (1/4" Tempered)

Packing List

- (4) 2.5 Pound Bags of Crushed Glass Media (10 pounds total)

Measuring Glass Quantity

The glass is supplied from the manufacturer in 2.5 lb. bags. Depending upon appliance, you may need to measure glass quantity. Use a liquid measuring cup to accurately determine the amount of glass used.

1 Level Cup (8 fl. oz.) (240ml) = 0.95 lbs.

So...1 Slightly Rounded Cup = 1 lb.

Compatibility, Quantity Used, and Notes

THIS IS 1/4" GLASS. Make sure the appliance / media (logs, stones, etc.) specifies the part numbers listed above. Different models may use different sized crushed-glass and may not be compatible.

On Gas Appliances: It is better to use too little glass than too much. Excessive glass, especially when using propane (LP), will lead to sooting. Place the glass as thinly as possible over the burner ports for optimum burner performance. Do not place glass over the pilot assembly.

The glass must be installed in accordance with the installation manual or instruction sheet included with the appliance or media kit. Failure to install the glass correctly may lead to a safety hazard and will void the warranty

GLASS DUST

During shipment, some of the glass may crumble, leaving glass dust in the bottom of the bag. This dust should be discarded.

The crushed glass is used on various Travis products. Refer to the instructions included with the unit or media (logs, stones, etc.) for determining the correct amount of crushed glass used.
